

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Severall Observations of the Respect of the Needle to a piece of Iron held Perpendicular; made by a Master of a Ship Crossing the Æquinoctial Line, Anno 1684. and communicated by M^r. Arthur Bayly. F. of the R. S.

ALL the way from *England* to 10^{d} . *North Latitude*, the *North* point of the needle respected the upper end of the *Iron*, and the *S^o.* point the lower end very strongly.

Latitude. 9^{d} . $42'$ *N^o.* and *Meridian* distance from the *Lizard* 9^{d} . $32'$ *West*. The *S^o.* point of the needle did strongly respect the lower end of the *Iron*, but the *N^o.* point did not so strongly respect the upper end as before.

Lat^d. 4^{d} . $33'$ *N^o.* and *Meridian* dist. 5^{d} . $18'$ *West* from the *Lizard*. In this *Lat^d.* the *North* point of the needle began to decline from the upper end of the *Iron*, and the *S^o.* point to incline more strongly to the lower end.

Lat^d. 0^{d} . $52'$ *S^o.* and *Meridian* dist. 11^{d} . $52'$ *West* from the *Lizard*. Here the *North* point of the needle would not respect the upper end of the *Iron*, nor the lower end neither, but the *South* point did still incline to the lower end, though not so strongly.

Lat^d. 5^{d} . $17'$ *S^o.* and *Meridian* dist. 15^{d} . $09'$ *West* from the *Lizard*. Here the *South* point of the needle would turn to the lower end of the *Iron*, about 2 points, but remove the *Iron* any further, and it would fly away from it, and respect the *Poles* again; but it would not respect the upper end at all; neither would the *North* point respect either; but lay the *Iron* *Horizontall*, and let the ends of the *Iron* respect the *Poles* of the

World, and the *North* point of the needle would turn to the *South* end of the Iron, and contrarily the *South* point of the needle would turn to the *North* end of the Iron, and alter its respect to the *Poles* 5 or 6 points, and no farther; but hold the Iron perpendicular, and put the middle thereof to the needle, it would still respect the *Poles*.

Lat^d. 8^d. 17' *South*, and *Meridian* dist. from the *Lizard* 17^d. 35' *West*.

Here the N°. point of the needle would not respect the upper end of the Iron, but rather forsake it, but the S°. point would still something respect the lower end, and alter its true position about 2 points; but take the Iron and lay it aslope over the Compass, so that the upper end be towards the S°. *Pole*, and the lower end to the N°. and then the N°. point would respect the lower end, and follow it; but if you point the upper end to the N°. and the lower end to the S°. the N°. point will forsake it. But if you lay it *Horizontall*, it would do as in the foregoing Observations.

Lat^d. 15^d. 00' S°. and 20^d. 00' *West* from the *Lizard*.

Here the S°. point of the needle began to respect the upper end of the Iron, and the N°. point the lower end, and follow'd it about one point; but lay the Iron *Horizontall*, and the N°. point respected the S°. end of the Iron, and contrarywise, &c.

Lat^d. 20^d. 20' S°. and 19^d. 20' *West* from the *Lizard*.

Note that the S°. point of the needle respected the upper end of the Iron, and the N°. point the lower end pretty strongly, and follow'd it, 3 or 4 points; but lay it *Horizontall* and it would do as before.

Lat^d. 29^d. 25', and 13^d. 10' *West* from the *Merid.* of the *Lizard*..

Here the S°. point of the needle respected the upper end of the Iron, and the N°. point the lower end strongly.
